RESEARCH INTERESTS

- Rational decision-making:** How do normative models of rational decision-making transform over time? What are good criteria for determining whether a decision is rational?
- Second-order preferences:** What should we do when we have preferences that we wish we didn't have? How do these preference conflicts differ from self-control conflicts?
- Social inferences:** How do people make causal inferences about other' preferences? How do people strategically signal desirable traits about themselves to others?
